This book provides an up-to-date analysis of major issues in the field of sexual abuse, both established and emerging, and asks how we can develop the most evidence-based, fit-for-purpose approach in responding to and preventing it. Sexual abuse is a multi-disciplinary, international issue that exists at the crossroads of theory, practice, and research. Therefore, the book is future-facing and asks the reader to critically reflect upon current and future research and practice, and to ask: what next? In doing this the book examines the theory, research, and practice on a range of topics including, grooming behaviors, risk management, risk assessment, sexual fantasies, professional engagement, and policy

development. These, and other essential topics for effective and efficient care for people who have committed sexual offenses, are addressed as part of the ultimate goal to reduce and even eliminate sexual victimization in the future. In contemporary society, science constitutes a significant part of human life in that it impacts on how people experience and understand the world and themselves. The rapid advances in science and technology, newly established societal and cultural norms and values, and changes in the climate and environment, as well as, the depletion of natural resources all greatly impact the lives of children and youths, and hence their ways of learning, viewing the world, experiencing phenomena around them and interacting with others. These changes challenge science educators to rethink the epistemology and pedagogy in science classrooms today as the practice of science education needs to be proactive and relevant to students and prepare them for life in the present and in the future. Featuring contributions from highly experienced and celebrated science educators, as well as research perspectives from Europe, the USA, Asia and Australia, this book addresses theoretical and practical examples in science education that, on the one hand, plays a key role in our understanding of the world, and yet, paradoxically, now acknowledges a growing number of uncertainties of knowledge about the world. The material is in four sections that cover the learning and teaching of science from science literacy to multiple representations; science teacher education; the use of innovations and new technologies in science teaching and learning; and science learning in informal settings including outdoor environmental learning activities. Acknowledging the issues and challenges in science education,

this book hopes to generate collaborative discussions among scholars, researchers, and educators to develop critical and creative ways of science teaching to improve and enrich the lives of our children and youths. *Innovations and Challenges in Applied Linguistics from the Global South* provides an original appraisal of the latest innovations and challenges in applied linguistics from the perspective of the Global South. Global South perspectives are encapsulated in struggles for basic, economic, political and social transformation in an inequitable world, and are not confined to the geographical South. Taking a critical perspective on Southern theories, demonstrating why it is important to view the world from Southern perspectives and why such positions must be open to critical investigation, this book: charts the impacts of these theories on approaches to multilingualism, language learning, language in education, literacy and diversity, language rights and language policy; provides broad historical and geographical understandings of the movement towards a Southern perspective and draws on Indigenous and Southern ways of thinking that challenge mainstream viewpoints; seeks to develop alternative understandings of applied linguistics, expand the intellectual repertoires of the discipline, and challenge the complicities between applied linguistics, colonialism, and capitalism. Written by two renowned scholars in the field, *Innovations and Challenges in Applied Linguistics from the Global South* is key reading for advanced students and researchers of applied linguistics, multilingualism, language and education, language policy and planning, and language and identity. Local and Regional Authorities (LRAs) manage the land and the sea,

provide a link between global goals and local communities, and have an increasingly important role in biodiversity protection. However, they face numerous obstacles in accessing and attracting public and private financing for biodiversity. In this context, the objectives of this study were threefold: 1) to summarise the sources of funding for biodiversity projects available to LRAs; 2) to identify the main barriers and challenges in accessing that funding; and 3) to formulate recommendations on overcoming those barriers. Governments worldwide assume that national competitiveness can be improved by developing workforce skills. This book critically examines this 'high skills' vision at both policy and practice levels. It challenges an oversimplified policy rhetoric that underestimates the complexity of the processes involved in developing a skilled workforce. The book focuses on key issues relating to the high skills agenda: skills and political economy; different investment strategies for producing skills; qualification systems and learning. A multidisciplinary team of authors from a range of disciplines, including economics, management and education, provides the cross-cutting international and comparative analysis. Editorial comment links their explorations to wider questions of skill formation processes and overarching questions are addressed through in-depth analysis of the roles of higher education, apprenticeship and formal school learning in skill formation.

Solid and liquid wastes generated as a result of various agricultural, municipal, industrial and several other processes have become a global concern. This book provides detailed information on eco-friendly approaches and low-cost strategies for solid and liquid waste management. It emphasizes how these

wastes can be utilized as alternatives to expensive raw materials thus encouraging sustainable development. This book will be useful to all those who have a keen interest in waste management processes. This book outlines the contemporary issues and challenges that confront both the nations and the communities of the South Asian region, particularly India, where control over water has always been a symbol of social and political power. It explores the adequacy of the competing and/or complementary explanations for these daunting challenges of envisioning water management in one of the most densely populated parts of the world with a long history of water control. *Water First: Issues and Challenges for Nations and Communities in South Asia* brings together cutting edge interdisciplinary perspectives from renowned scholars on the histories, politics, ecologies and cultures of water. Through a rich offering of case studies and local examples, it elaborates on current water management practices, the passions and complexities that these practices have inspired, and the policies that have impacted the patterns of water use. The book shall hold great interest for policy makers, social scientists, students, research bodies and organizations, and national and international development and donor agencies. This work highlights the new challenges facing the French wine industry and the issues that arise from it. Written on the basis of academic work and field studies, conducted by a group of Montpellier academics in Economics and Management Sciences (Groupe Montpellier Vin), this book presents recent and original research results and raises the key issues related to finance, strategy, international management and marketing. Professionals in the sector, academics, students and wine enthusiasts will find

up-to-date information, in-depth analyses and above all, an invitation to a stimulating debate on the prospects of this traditional, yet innovative sector. ""This book examines the opportunities and challenges for rural and mountain tourism development in geographically disadvantaged areas"--Provided by publisher"-- "This book deals with current linguistic challenges that you read and hear about everyday in the media, issues with which Malaysian society is greatly concerned. These are dichotomous challenges between national concerns and international needs, between the use and application of the national language and the international lingua franca - English - and between sub-varieties of Malaysian English and standards for international communication"--Back cover. Ravindra Nath Sharma, b. 1941, Indian library and information scientist; contributed articles. A unique collection of thirty experiments ranging from ancient astronomy to cosmology, each containing one or more challenges for the reader. The progression here is from the Earth outward through the solar system to the stellar and galactic realm. Topics include the shape of the sky; Stonehenge as a stone-age abacus; determining the size of the Earth; the distance of the moon, stars and planets; planetary mass, density, temperature and atmosphere; the speed of light; the nature of the quiet and active sun; photometry and spectroscopy; star clusters and variable stars; and fundamental properties of stars. Texas features a growing economy and population. The state boasts a large and well-developed network of roads, freight railroads, and air facilities, which make the state a vital link in the movement of people and goods. However, as the state continues to grow in population and economic significance, these systems are straining

to meet state, national, and even global needs. It is increasingly obvious to residents and state officials that Texas should consider implementing alternative modes of transport, including development of passenger rail, for which Texas currently lags behind many of its peer states. Passenger rail provides quantifiable benefits in displacing less energy-efficient and higher pollutant-emitting air and automobile modes while generating potential positive economic impacts and enhancing consumer choice and multimodalism. Conveniently, renewed national interest in rail has invigorated research measuring the applicability of passenger rail services to many different regions of the United States, with the possibility that future national transportation visions will include passenger rail as an essential element. This thesis seeks to clarify the potential for passenger rail specifically in Texas through comparison and contrast with other regions and nations in the midst of new national-level knowledge and the changing transportation opportunities and challenges facing the state. Some of the ideal characteristics of successful international passenger systems exist in Texas, including optimal city spacing and a well-established rail network, which have fuelled ongoing interest demonstrated by various system proposals for high-speed intercity transportation in Texas over the last four decades. Despite these characteristics, the state presents a number of barriers to rail transport rooted in low transit use coupled with generally lower density and ambivalent support from politicians and residents when officials present realities of eminent domain and land use changes. However, with revitalized national rail interest and new federal rail planning requirements, the state may yet be able to work through these

challenges to exploit the opportunities the state possesses. Bureau of Prisons: Recent Concerns and Challenges for the Future This book is all about helping you to make the best and most of your life. A compendium of 20 essential life skills packed with tips, techniques and inspiration. This book will help you to survive and thrive and deal more positively with the demands and challenges of everyday modern living. 'Liggy Webb's unique insight into the issues surrounding essential life skills is profound' Dr David Batman - Director of Research - Foundation for Chronic Disease Prevention - Medical Adviser to the Global Corporate Challenge. As Morgan Stanley's chief Asia specialist, getting Asia right is Stephen Roach's personal obsession, and this in-depth compilation represents more than 70 of Roach's key research efforts not just on Asia, but also on how the region fits into the broad context of increasingly globalized financial markets. The book argues that the "Asia factor" is not a static concept, but rather one that is constantly changing and evolving. Broken down into five parts—Asia's critical role in globalization; the coming rebalancing of the Chinese economy; a new pan-regional framework for integration and competition; and a frank discussion of the biggest risk to this remarkable transformation—this book will help readers understand and profit from the world's most dynamic region. Governance: Issues and Challenges offers a detailed summary of the insights into the policy and governance processes over the last seven decades in India, providing a comparative and conceptual framework of governance drawing instances from developed countries, situating governance imperatives in South Asia and finally, giving centrality to the issues and challenges of governance in India. This is also a unique

attempt to address the need for a textbook on governance as per the syllabi of Indian universities. This book covers length and breadth of the topic of governance which has gained prominence since 2014. Addressing a wide range of issues in applied linguistics, sociolinguistics, and multilingualism, this volume focuses on language users, the ‘people.’ Making creative connections between existing scholarship in language policy and contemporary theory and research in other social sciences, authors from around the world offer new critical perspectives for analyzing language phenomena and language theories, suggesting new meeting points among language users and language policy makers, norms, and traditions in diverse cultural, geographical, and historical contexts. Identifying and expanding on previously neglected aspects of language studies, the book is inspired by the work of Elana Shohamy, whose critical view and innovative work on a broad spectrum of key topics in applied linguistics has influenced many scholars in the field to think “out of the box” and to reconsider some basic commonly held understandings, specifically with regard to the impact of language and languaging on individual language users rather than on the masses. Every day presents new challenges as the face of global economics changes. In this first book in the Emerald Studies in Finance, Insurance, and Risk Management, expert editors and contributors come together to discuss global response to new uncertainty and challenges. The present work provides a platform for leading Data designers whose vision and creativity help us to anticipate major changes occurring in the Data Design field, and pre-empt the future. Each of them strives to provide new answers to the question, “What challenges await Data Design?” To avoid falling

into too narrow a mind-set, each works hard to elucidate the breadth of Data Design today and to demonstrate its widespread application across a variety of business sectors. With end users in mind, designer-contributors bring to light the myriad of purposes for which the field was originally intended, forging the bond even further between Data Design and the aims and intentions of those who contribute to it. The first seven parts of the book outline the scope of Data Design, and presents a line-up of “viewpoints” that highlight this discipline’s main topics, and offers an in-depth look into practices boasting both foresight and imagination. The eighth and final part features a series of interviews with Data designers and artists whose methods embody originality and marked singularity. As a result, a number of enlightening concepts and bright ideas unfold within the confines of this book to help dispel the thick fog around this new and still relatively unknown discipline. A plethora of equally eye-opening and edifying new terms, words, and key expressions also unfurl. Informing, influencing, and inspiring are just a few of the buzz words belonging to an initiative that is, first and foremost, a creative one, not to mention the possibility to discern the ever-changing and naturally complex nature of today’s datasphere. Providing an invaluable and cutting-edge resource for design researchers, this work is also intended for students, professionals and practitioners involved in Data Design, Interaction Design, Digital & Media Design, Data & Information Visualization, Computer Science and Engineering. Over the past few years, the Institute for Prospective Technological Studies (IPTS) has been carrying out research in the field of ageing, with a focus on the role that Information and Communication Technologies (ICT) can play to promote Active

Ageing. IPTS has looked at the issue from several perspectives, including the socio-economic and technological dimensions of both the ageing phenomenon and the Active Ageing policies that the EU is now adopting. Information and Communication Technologies for Active Ageing attempts to reflect aspects of the contribution ICT can make to quality of life for older citizens in Europe. Benefits can be found in health, employment, housing and elsewhere. The potential market for innovative solutions in ICT for Active Ageing is crucial for the European economy and for the society at large. The European Union has the opportunity to become a research and market leader through innovative applications and services for ageing. Moreover, the promotion of societal values in Europe regarding ageing can serve as a model for other ageing societies. This book is to be expected to contribute to the debates on ICT for Active Ageing and provide important hints for research in the field fostered by the European Commission's Directorate General for Information and Media.

Peter F. Drucker discusses how the new paradigms of management have changed and will continue to change our basic assumptions about the practices and principles of management. Forward-looking and forward-thinking, *Management Challenges for the 21st Century* combines the broad knowledge, wide practical experience, profound insight, sharp analysis, and enlightened common sense that are the essence of Drucker's writings and "landmarks of the managerial profession." --Harvard Business Review

The increasingly integrated global economy presents both opportunities and challenges to national and international policymakers. Global economic integration is widely thought to improve the allocation of resources, promote

technological transfer, and enhance living standards. But, at the same time, economic integration has frequently been associated with growing trade imbalances, increased financial market volatility, and less effective domestic macroeconomic policies. To identify domestic and international policies that will help nations around the world achieve the greatest net benefits from global integration, the Federal Reserve Bank of Kansas City sponsored a symposium, titled "Global Economic Integration: Opportunities and Challenges," at Jackson Hole, Wyoming, on August 24-26, 2000. The symposium brought together a distinguished group of central bankers, academics, and financial market representatives to discuss these issues. The host of titular podcast offers over sixty ideas to boost creativity, achieve fitness goals, increase productivity, improve relationships and more. Change isn't always easy, but you can do it! Packed with powerful ideas for improving your life in all areas, including fitness, food, mindfulness, relationships, networking and more, this book shows how to create lasting habits by first succeeding at a thirty-day challenge. Author Rosanna Casper shares dozens of practical tips, helpful resources and her own secret tricks that will keep you motivated and committed through day thirty and beyond. If you're ready to make some positive changes in your life, just pick a challenge and get started: Walk 10,000 steps thirty days without (added) sugar Cook one new recipe per day Get better sleep Get rid of clutter Take a photo every day Spend thirty minutes outdoors Read twenty pages a day "This helpful text represents another brick in the wall for social workers and social work students seeking to make sense of personalisation/person-centred support, personal budgets and the changing role of social work in

the future ... This book will help all concerned with social work make better sense of what this should look like - if it is to support social justice, inclusion and equality.” Professor Peter Beresford OBE, Brunel University and Chair, Shaping Our Lives "This informative text bases the Personalisation discussion on real life examples and perspectives, providing a balanced account of the opportunities and obstacles faced by all stakeholders engaged in this agenda .... The final chapter on managing change provides the reader with an opportunity to step forward in time and consider how Personalisation might be located within the historical timeline of delivering social care and whether concepts of co-production, empowerment and citizenship can in fact become central to this agenda. A book to get you 'thinking' and 'doing'."

Ali Gardner, Senior Lecturer, Manchester Metropolitan University, UK "The authors have written a timely and highly topical book on the impact that Personalisation has and will have upon the world of Social Work. They do so in a very accessible way through highlighting the benefits of the model to all concerned, but crucially they explore some of the many concerns. In particular they address the anxieties expressed by qualified social workers upon their future role. ... I shall certainly draw upon the text for my own teaching and learning and will encourage students and practitioners to do the same." Paul Hollingdale, Course Leader, University of Huddersfield, UK

Personalisation remains a huge talking point in the world of social care. This timely book addresses the tensions, opportunities and challenges faced by social workers attempting to implement personal funding and support. Written by three academics with extensive first hand experience of supporting people in personalised ways, the book

highlights the ethical dilemmas and complexities of frontline practice and is grounded in a pragmatic and creative approach to personalisation. The authors offer an honest representation of positive aspects of personalisation and examine areas that cause concern. The book also:

- Contains scenarios based on realistic examples of supporting service users and carers
- Recognises the political, social, cultural and individual factors that interplay in personalisation
- Provides a balance between an academic understanding of personalisation and application in practice
- Presents a vision for what the future would look like with fully implemented personalisation in adult social care

The Russian Federation has undergone a major reform of the pension system which has resulted in a shift from a single, publicly managed system to one supplemented by a mandatory, privately managed occupational funded component and voluntary pension arrangements. The reform aimed to tackle a set of problems of demographic, social and economic order inherent to retirement income provision and was viewed as a way to improve old-age security of retirees in Russia by ensuring long-term financial and fiscal stability of the pension system and adequacy of pension benefits. This book examines these reforms and new challenges related to the reforms. Most prominent among the challenges is the need to further strengthen the pension system regulatory capacity and enforcement powers of the authorities in charge of the oversight of private pension institutions

Welcome to a book written to challenge you, improve your brainstorming abilities, and sharpen your game design skills! \*\*Challenges for Game Designers: Non-Digital Exercises for Video Game Designers\*\* is filled with enjoyable, interesting, and challenging exercises to

help you become a better video game designer, whether you are a professional or aspire to be. Each chapter covers a different topic important to game designers, and was taken from actual industry experience. After a brief overview of the topic, there are five challenges that each take less than two hours and allow you to apply the material, explore the topic, and expand your knowledge in that area. Each chapter also includes 10 "non-digital shorts" to further hone your skills. None of the challenges in the book require any programming or a computer, but many of the topics feature challenges that can be made into fully functioning games. This book offers new perspectives of transdisciplinary research, in methodological as well as theoretical respects. It provides insights in the two-fold bio-physical and the socio-cultural global embeddedness of local living conditions on the basis of selected empirical studies from Latin America, Asia, Africa, Australia and Europe. The theoretical foundations of ecological research and sustainability policies were developed at the end of the nineteenth century. They are largely based on investigations of living spaces and the evolution and differentiation of varied life forms. This perspective is embedded in the practical and theoretical European problem situations of the past and lacks social and cultural differentiation. The transformation of spatial and natural relations as a result of the globalization process is so radical that new theories are needed to solve 21st century ecological problems. Moreover, in view of the lack of an ontologically sound and promising strategy for transdisciplinary problem solving, as well as an acceptable consideration of the power of cultural schemas relating to natural living's interpretations, there is a strong need to focus on sustainable social practices, habits and routines, rather

than on predominantly living spaces or eco-topes. This book elaborates on the transdisciplinary approach by reflecting on the theoretical heritage and a global perspective of sustainability, by focusing on the primary role of a social approach in sustainability research and by putting emphasis on cultural dimension of sustainability. It postulates that global sustainability is grounded in a global understanding of our everyday activities. Public health entails the use of models, technologies, experience and evidence derived through consumer participation, translational research and population sciences to protect and improve the health of the population. Enhancing public health is of significant importance to the development of a nation, particularly for developing countries where the health care system is underdeveloped, fragile or vulnerable. This book examines progress and challenges with regards to public health in developing countries in two parts: Part 1 “General and Crosscutting Issues in Public Health and Case Studies” and Part 2 “Country-Specific Issues in Public Health.” For example, assuring equity for marginalized indigenous groups and other key populations entails the application of transdisciplinary interventions including legislation, advocacy, financing, empowerment and de-stigmatization. The diverse structural, political, economic, technological, geographical and social landscape of developing countries translates to unique public health challenges, infrastructure and implementation trajectories in addressing issues such as vector-borne diseases and intimate partner violence. This volume will be of interest to researchers, health ministry policy makers, public health professionals and non-governmental organizations whose work entails collaborations with public health systems of developing

nations and regions. In an era of almost boundless individual opportunities, vulnerability, paradoxically, has gained significant attention. Undoubtedly this book significantly contributes to the debates on this very complex phenomenon, dealing with both the specific aspects of vulnerable individuals and groups' legal positions, as well as presenting the concept of vulnerability in international law. This book brings together scholars engaging with legal and actual positions of women, children and other vulnerable persons. Authors in detail discuss - among others - such issues as: political violence, motherhood in prison, age assessing of foreigners, infanticide or exclusion of the elderly. It will be of interest for academics in the fields of law and sociology, as well as vulnerability-oriented practitioners. Globalization, the information age, and the rise of the knowledge-based economy are significantly transforming the way we acquire, disseminate, and transform knowledge. And, as a result, knowledge production is becoming closer and more directly linked to economic competitiveness. This evolution is also putting new and urgent demands on academic institutions to adjust to the changing needs of society and economy. In particular, there is growing pressure on the institutions of higher education and research in developed economies to find and affirm their new role in the national innovation system.
