This is an enthusiastic and beautifully described account of one woman's career as a fire-tower observer: a simple, satisfying lifestyle that embraces life without modern amenities. Always attracted to the outdoors, Sharon Stratton had applied to be a fire-tower observer five times before she was finally accepted. She headed to the forest with only her dogs for company to lead a seasonal, largely solitary life of oneness with nature and immense responsibility. Her story reveals in intriguing detail how fire-tower observers live, shedding light on the community of observers stationed in towers and lookout sites throughout the boreal forests. Through her words, it's possible to experience the rush of adrenaline she feels when she spots and reports fires from atop her 100-foot tower, and to discover with her the beauty and diversity of the flora and fauna. Anyone who dreams of a solitary, simple existence will find *Between Forest and Sky* a memorable read.

Tower Bridge London Blank Wide Ruled Notebook Journal Ruled white paper High quality cover art 120 pages 22 lines per page wide ruled 8.5 x 11 inches (21.59 x 27.94 cm) Perfect for short scribbles or longer form writing This is the first comprehensive monograph on the mathematical theory of the solitaire game "The Tower of Hanoi" which was invented in the 19th century by the French number theorist Édouard Lucas. The book comprises a survey of the historical development from the game's predecessors up to recent research in mathematics and applications in computer science and psychology. Apart from long-standing myths it contains a thorough, largely self-contained presentation of the essential mathematical facts with complete proofs, including also unpublished material. The main objects of research today are the so-called Hanoi graphs and the related Sierpiński graphs. Acknowledging the great popularity of the topic in computer science, algorithms and their correctness proofs form an essential part of the book. In view of the most important practical applications of the Tower of Hanoi and its variants, namely in physics, network theory, and cognitive (neuro)psychology, other related structures and puzzles like, e.g., the "Tower of London", are addressed.

Numerous captivating integer sequences arise along the way, but also many open questions impose themselves. Central among these is the famed Frame-Stewart conjecture. Despite many attempts to decide it and large-scale numerical experiments supporting its truth, it remains unsettled after more than 70 years and thus demonstrates the timeliness of the topic. Enriched with elaborate illustrations, connections to other puzzles and challenges for the reader in the form of (solved) exercises as well as problems for further exploration, this book is enjoyable reading for students, educators, game enthusiasts and researchers alike. Journals are great for writing down ideas, taking notes, writing about travels and adventures, describing good and bad times. Writing down your thoughts and ideas is a great way to relieve stress. Asian American women scholars experience shockingly low rates of tenure and promotion because of the ways they are marginalized by intersectionalities of race and gender in academia. Fight the Tower shows that Asian American women stand up for their rights and work for positive change for all within academic institutions. The essays provide powerful portraits, reflections, and analyses of a population often rendered invisible by the lies sustaining intersectional injustices to operate an oppressive system. Journals are great for writing down ideas, taking notes, writing about travels and adventures, describing good and bad times. Writing down your thoughts and ideas is a great way to relieve stress.
