Suzuki is Japan's best-known director. He has been internationally acclaimed for his postmodern adaptations of classics by Nanboku, Euripides, Shakespeare and Chekhov since the 1970s, including *The Trojan Women*, *King Lear* and *Three Sisters* and, equally, for his powerful actor training system, which combines elements of Noh and Kabuki with Western realism. Inviting artists from around the world to perform at his Toga and Shizuoka International Festivals, Suzuki has fostered productive exchanges with Jean-Louis Barrault, Robert Wilson, Kanze Hisao, Ashikawa Yoko and numerous others. This 2004 book traces Suzuki's rise from Little Theatre director to international festival celebrity, links his unique Surrealist dramaturgy with his intercultural training system, and gives in-depth descriptions of his most acclaimed productions. Based on author indexes and address directories included in: Current contents: chemical sciences, Current contents. Life sciences,

ISSN 0011-3409, and Current contents: physical sciences. In 1968, Suzuki Seijun—a low-budget genre filmmaker known for movies including *Branded to Kill*, *Tokyo Drifter*, and *Youth of the Beast*—was unceremoniously fired by Nikkatsu Studios. Soon to be known as the “Suzuki Seijun Incident,” his dismissal became a cause for leftist student protestors and a burgeoning group of cinephiles to rally around. His films rapidly emerged as central to debates over politics and aesthetics in Japanese cinema. William Carroll offers a new account of Suzuki’s career that highlights the intersections of film theory, film production, cinephile culture, and politics in 1960s Japan. Carroll places Suzuki’s work between two factions that claimed him as one of their own after 1968: the New Left and its politicized theoretical practice on one hand, and the apparently apolitical cinephiles and their formalist criticism on the other. He considers how both of these strands of film theory shed light on the distinctive qualities of Suzuki’s films, and he explores how both Suzuki’s works and unheralded Japanese film theorists offer new ways of understanding world cinema. This book presents both a major reinterpretation of Suzuki’s work—which influenced directors such as John Woo, Jim Jarmusch, and Quentin Tarantino—and a new lens on postwar Japanese film culture and industry. *Suzuki Seijun and Postwar Japanese Cinema* also includes a complete production history of Suzuki’s filmography along with never-before-discussed information about his unfinished film projects. Boasting well over 6,000 contributors from 12 countries, the Dictionary offers its readers authoritative and comprehensive global coverage. A resource for both art and cultural studies, the Dictionary serves as a unique guide to all the visual arts: painting, sculpture, architecture, photography, drawing, printmaking, as well as the decorative arts. The Dictionary ranges far both geographically and historically; it features unparalleled coverage of Africa, Southeast Asia, Central Asia and Mongolia, China, India, the Islamic world, Japan, Korea, Native North America, Pacific and Aboriginal Australia, Pre-Columbian America, Ancient Egypt, Ancient Greece, the Ancient Near East, and Ancient Rome. Providing depth as well as breadth, *The Dictionary of Art* examines important art forms and key issues of design, taste, function, and patronage, illuminating them in light of the cultural context in which they developed. Reflecting the growing volume of published work in this field, researchers will find this book an invaluable source of information on current methods and applications. *Enzyme Nomenclature 1978* is based upon the recommendations of the Nomenclature Committee of the International Union of Biochemistry on the Nomenclature and Classification of Enzymes. This book deals with the naming of enzymes. The text describes problems encountered in the past when individual scientists named enzymes randomly, resulting in duplication, misnomers, and confusion. Some order followed upon the establishment of the International Commission on Enzymes. This

book also explains the classification and nomenclature scheme through general principles that should be followed in dealing with enzymes. The text describes the systematic and trivial names, the key to numbering of enzymes, and the rules of classification and nomenclature. The book also contains the enzyme list including the class of oxidoreductases, transferases, hydrolases, lyases, and ligases (synthetases). The appendix contains the nomenclature of electron-transfer proteins, which include flavoproteins, proteins containing reducible disulfide, cytochromes, iron-sulfur proteins, and other metalloproteins. An index lists all the enzymes in alphabetical order. This handy reference will be useful for scientists involved in biochemistry, molecular biology, micro-biology, and researchers whose works involve enzyme and medical research. This volume comprises original research papers reporting findings collected by participants of the International Workshop on the Mangrove Ecosystem of Deep Bay and the Mai Po Marshes, jointly organized by the University of Hong Kong and World Wide Fund for Nature Hong Kong and held at the Mai Po Marshes in September 1993. This book presents the most recent results in the area of bulk nanostructured materials and new trends in their severe plastic deformation (SPD) processing, where these techniques are now emerging from the domain of laboratory-scale research into the commercial production of various bulk nanomaterials. Special emphasis is placed on an analysis of the effect of nanostructures in materials fabricated by SPD on mechanical properties (strength and ductility, fatigue strength and life, superplasticity) and functional behavior (shape memory effects, magnetic and electric properties), as well as the numerous examples of their innovative applications. There is a high innovation potential for industrial applications of bulk nanomaterials for structural use (materials with extreme strength) as well as for functional applications such as nanomagnets, materials for hydrogen storage, thermoelectric materials, superconductors, catalysts, and biomedical implants. Annotation Focuses on the cooperation between Hong Kong and Japanese cinema from the Sino-Japanese War, which broke out in the 1930s, up until the early 1970s, to re-evaluate the significance of this event in the context of Asian film history. Weekly report to managers of Asia/Pacific operations. This book is written for scientists who require information on organobismuth chemistry, either by specific topic or by compound. "Organobismuth Chemistry" covers, through early 1999, stoichiometric compounds that contain the Bi-C bond; not included, with the exception of a few examples, are inorganic compounds, minerals, metal alloys, and non-stoichiometric materials. Organobismuth chemistry is covered in a comprehensive, self-contained manner. The book focuses on the academic aspects of the field; therefore, references to patents are made only when pertinent. Chapter 1 serves as an introduction to bismuth as the element. In chapters 2 to 4, organobismuth compounds are classified according to the types of compounds and dealt in

detail. Chapter 5 is devoted to the use of bismuth and derivatives in organic transformations. In the first four chapters, brief to moderate descriptions for selected experimental procedures are included; they are intended to inform the readers of relevant protocols and should serve in preparative studies which are based on analogies. In the final chapter the X-ray data of fundamental and/or structurally interesting organobismuth (III) and (V) compounds are collected. At the beginning of each chapter, the text is preceded by detailed table of contents of the subject dealt in it. By inspection of the table, it should be possible to locate quickly information on a specific organobismuth compound. Definite efforts have been made to include all factual data pertinent to an understanding of each class of organobismuth compounds. The main attention is paid to the methods of synthesis, molecular structure, and chemical behaviours of organobismuth compounds, although some knowledge of spectroscopy and other physical properties are also included. The format for presenting information has both descriptive information and numerical data. Numerical data are mostly presented in tabular form. Tables of known compounds in each chapter are organized so as to enable the readers to make easy access to the most relevant data source of a compound. The nomenclature does not follow strictly the recommendations of IUPAC, but usage is mostly consistent with common practice in the current literature. In order to help the readers to save time in looking for appropriate spectral data, an effort has also been made to provide the IR, MS, NMR and UV spectral data sources in tabular form. All references for chapters are collected together in a list at the end of the book. In the list, references are given chronologically both in code and in full form, with authors names. This book will appeal to academic and industrial researchers alike, and will be particularly useful to chemists engaged in bench work. In addition it is hoped that this book will provide a stimulus as the basis for further development of organobismuth chemistry.
