GAO's analysis of DOD data indicates that more than 531,000 reservists have been mobilized in support of GWOT as of June 30, 2006, and more than 378,000 reservists, or 71 percent of the number mobilized, have

been deployed. The number of reservists deployed increased through fiscal year 2003 and remained stable through fiscal year 2005. The majority of reservists have been deployed once. GAO's analysis further indicates that of the more than 378,000 reservists who have deployed in support of GWOT, 81 percent have spent a year or less deployed and 17 percent of reservists have spent more than 1 year but less than 2 years deployed. Of those who deployed, almost 98 percent were U.S. citizens. Since GWOT began, about 78 percent of reservists who were deployed were White, about 14 percent were Black or African American, and almost 90 percent identified themselves as non-Hispanic and 8 percent as Hispanic. Of those who were deployed, 89 percent were male and 11 percent were female. There were three variables volunteer status, location deployed, and unit deployed required by DOD policy for which the Defense Manpower Data Center (DMDC) could not provide data because the data either did not exist or were not reliable enough for the purposes of GAO's report. GAO found the deployment and mobilization data used to be reliable for providing descriptive information. However, the mobilization data, some deployment data fields, and DMDC's processes for data analyses need improvement. DMDC and the services have recently taken steps to improve the reliability of mobilization data; however, additional steps are needed to make mobilization data more reliable. DMDC and the services have undertaken a large-scale, challenging effort to replace all previous service provided mobilization data in DMDC's CTS database with new data from the services, referred to as rebaselining. This book provides an in-depth introduction to, and analysis of, the issues relating to the implementation of the recent Responsibility to Protect principle in international relations. The Responsibility to Protect (RtoP) has come a long way in a short space of time. It was endorsed by the General Assembly of the UN in 2005, and unanimously reaffirmed by the Security Council in 2006 (Resolution 1674) and 2009 (Resolution 1894). UN Secretary-General Ban Ki-moon has identified the challenge of implementing RtoP as one of the cornerstones of his Secretary-Generalship. The principle has also become part of the working language of international engagement with humanitarian crises and has been debated in relation to almost every recent international crisis – including Sudan, Sri Lanka, Myanmar, Georgia, the Democratic Republic of Congo, Darfur and Somalia. Concentrating mainly on implementation challenges including the prevention of genocide and mass atrocities, strengthening the UN's capacity to respond, and the role of regional organizations, this book introducing readers to contemporary debates on R2P and provides the first book-length analysis of the implementation agenda. The book will be of great interest to students of the responsibility to protect, humanitarian intervention, human rights, foreign policy, security studies and IR and politics in general. Climate change is one of the most pressing problems facing the global community. Although most states agree that climate change is occurring and is at least partly the result of humans' reliance on fossil fuels, managing a changing global climate is a formidable challenge. Underlying this challenge is the fact that states are sovereign, governed by their own laws and regulations. Sovereignty requires that states address global problems such as climate change on a voluntary basis, by negotiating international agreements. Despite a consensus on the need for global action, many questions remain concerning how a meaningful international climate agreement can be realized. This book brings together leading experts to speak to such questions and to offer promising ideas for the path toward a new climate agreement. Organized in three main parts, it examines the potential for meaningful climate cooperation. Part 1 explores sources of conflict that lead to barriers to an effective climate agreement. Part 2 investigates how different processes influence states' prospects of resolving their differences and of reaching a climate agreement that is more effective than the current Kyoto Protocol. Finally, part 3 focuses on governance issues, including lessons learned from existing institutional structures. The book is unique in that it brings together the voices of experts from many disciplines, such as economics, political science, international law, and natural science. The authors are academics, practitioners, consultants and advisors. Contributions draw on a variety of methods, and include both theoretical and empirical studies. The book should be of interest to scholars and graduate students in the fields of economics, political science, environmental law, natural resources, earth sciences, sustainability, and many others. It is directly relevant for policy makers, stakeholders and climate change negotiators, offering insights into the role of uncertainty, fairness, policy linkage, burden sharing and alternative institutional designs. It is easy to make a picture. Right? Think again. Of course, in today world, pictures are everywhere and tools for making them are available to everybody. This is a good thing, of course. That was in the inception of photography and still is one of the main goals of this medium; ability to record and remember for everybody. This book takes you to the time when photographs were not easy to make; time when in order to make a photograph, you should have a knowledge of chemistry, medicine, geology, optics, physics, astronomy. When photography was not the right, but luxury; when it was not done with the click in the split of second, but it was slow work by hand. Cyanotype, Dive into the Blue Process, is a book that speaks about, for a long time now commercially obsolete but beautiful photographic process, the Cyanotype. The book is not intended for scientific research, advanced or professional photographic artwork. The book is intended for the starters in alternative photo processes and professional that could use simplification of the process. It is the summary of the experiences in working with this alternative process. However, this does not mean that the workflow is not complicated and it should be followed step by step. This book will cover all those steps needed to get educated and proficient in creation process. Today you can purchase every chemical needed for the creation of the cyanotype already premixed, even already presentenced paper. In that way

you just need to put the negative, or the object we want to make a photogram of, and just expose it to the light. In this book you will find not just the chemical needed to make the solutions for mixing the your own magic lights catching potion, but also the reasons to do so. The cyanotype, the simplest among alternative photographic processes is made with combination of two, easy to get, chemicals. They have to be mixed in proper order and amounts for formula to work. These instructions should be followed strictly; however there is always space to experiment. Once the chemicals are separately mixed, they are also mixed together, and they become light sensitive. Once you have a light sensitive emulsion, you can start your work. In this book, we describe step-by-step, tool-by-tool, how do you get to this step and what you could expect. Everything else is left to you, your intuition, interests and creativity. For us, it was very important to perceive our work, so we taught it would be for you too. After you are done with creating, it is important to save your work, that is, to archive and present it in the right way. At the end of the book, its last chapters, you can find the sub-chapters that will explain the process of archiving and presenting, such as: flattening you prints; you can learn how to protect it from moisture and too much sun; how to mat your own work, and couple of different ways of framing your print. And believe me, if we could do it you can do it too
